FloodNet New Investigator/Collaborator/Project Application Form

Completed form should be sent to floodnet@mcmaster.ca

The NSERC Canadian FloodNet is an interdisciplinary research network designed to enhance the flood management capacity in Canada. Details on FloodNet research can be found on our website at www.nsercfloodnet.ca. Joining FloodNet can carry many potential benefits including access to recent research, collaboration opportunities and the potential to contribute in a meaningful way to improve Canada's resilience to flooding. There are two potential avenues in which an individual can join FloodNet. Both methods require (i) affiliation with either an academic institution or an organization which are partner of FloodNet or are being considered for partnership; and (ii) approval by FloodNet Project Leaders, Research Management Committee and Board of Directors.

Collaborator – A collaborator is an individual who has expertise related to FloodNet research but whose research is not directly funded by the Network. Collaborators often have externally funded research programs that complement or build upon those that exist within FloodNet and will benefit from their interaction with FloodNet researchers and partners. Collaborators can interact in many ways at the discretion of the leader of the project they wish to join and can include complimentary independent research, serving on student committees, co-supervising students, providing commentary on research findings, etc.

Investigator – An investigator is an individual who is conducting research that is directly funded through FloodNet. Investigators can join an existing project or propose a new project, subject to approval by the FloodNet Research Management Committee and Board of Directors. Approval of new investigators/projects is contingent on available funding and therefore an individual applying to join FloodNet as an investigator may be offered to join as a collaborator depending on the needs/resources of the Network.

Personal Information

Name: _____

Institution: _____

Department: _____

Email: _____

Phone: _____

What expertise do you bring to the FloodNet research program?

Research Information

Please select the appropriate box.

☐ I am interested in joining an existing FloodNet Project as an **Investigator**

☐ I am interested in joining an existing FloodNet Project as a **Collaborator**

Choose the Project you wish to join:

☐ I am proposing a new project/research for FloodNet

Theme:

Project title:

What study area(s) are you interested in and why? If you are proposing new study area(s) please provide details and justification for the additional study area(s).

Complete remaining section only if you are proposing a new project/research to FloodNet.

If applicable, provide details of the proposed new project

FloodNet
N S E R C

If applicable, indicate how this new project will seek to meet the strategic objectives of FloodNet.

How does the new project/research link to other FloodNet projects and what collaborations (cross-network, inter-lab, government, industry) would be developed?

Describe the milestones, goals and objectives (including dates) of the new research project.

Please indicate the level of support required by filling in the table below and providing details of other relevant information.

Highly Qualified Personnel:

SUA	M.A.Sc. / M.Sc.	Ph.D.	P.D.F.

List other costs and justification:

Are there external funds that will be used to (partially) support this research? Please provide details.

Would the proposed research be conducted with new/existing partners to FloodNet? Please provide details.

Please provide any additional details that are relevant to the proposed project/research.
